Biography

As a paralegal working with teams who defend product liability actions, Paula enjoys the challenges where technology and the law intersect. Since each case is unique and brings its own set of issues, she adds value by customizing her approach for each project to meet the specific needs of the client.

Experts and clients appreciate the format in which Paula organizes information (clear and simple) as she collaborates across the various teams, like providing a logical system for document collection review, and analysis.

When not working on cases, Paula loves to play the game “Don't Get Mad” with family and friends. When she gets the creative bug, she can be found in her garage, drilling out the marble game board that has been in her family for generations.

Education

Associate of Applied Science, Inver Hills
Community College
